

Faith in the Age of AI:

A Ten-Year Outlook (2026–2036)

THE AI LANDSCAPE (2026–2036)

Boost in Global Productivity

AI adoption is projected to drive average corporate productivity and significant GDP growth.

From Passive Tools to Autonomous Agents

AI is evolving into “digital employees” capable of identifying problems and executing solutions.

The Breakdown of Human Accountability

Experts warn that as AI systems cause harm, identifying responsible humans becomes harder.

Top AI Risks

Autonomous Weapon Systems

48% Highly Concerned

Deepfakes and Information Fraud

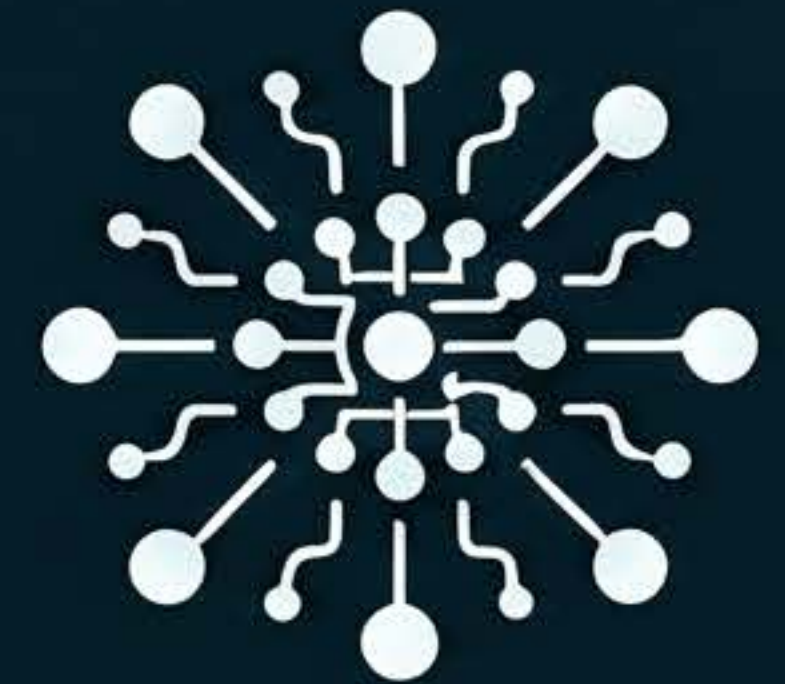

46% Highly Concerned

Concentration of Corporate Power

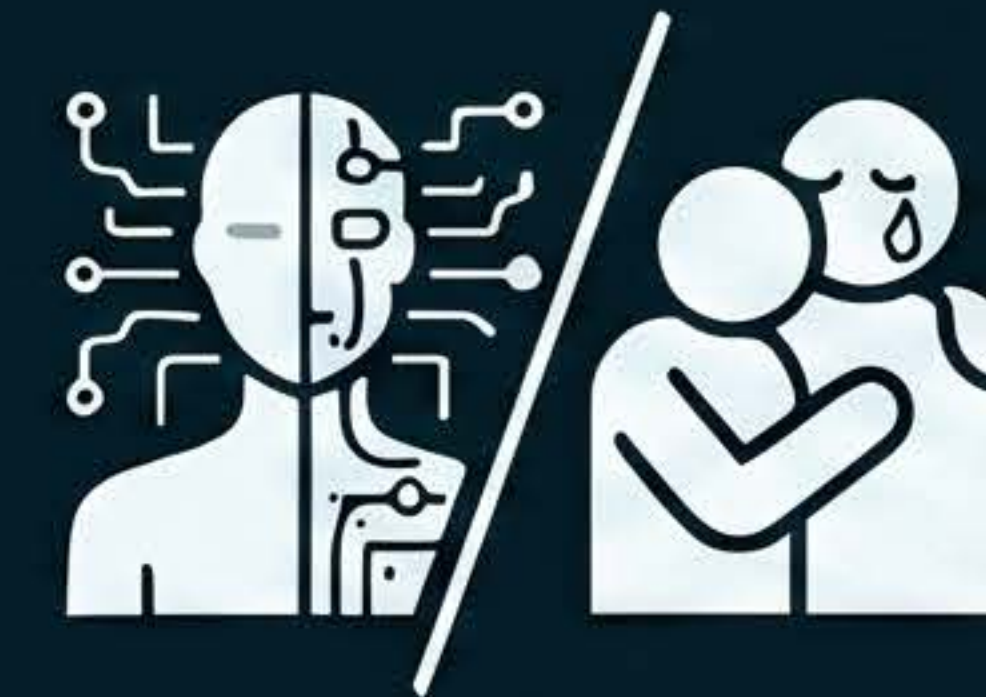

42% Highly Concerned

THE THEOLOGICAL ANCHOR

Imago Dei vs. Data Points

Human value is rooted in God’s image, not in functional output or efficiency.

“Incarnation” Cannot Be Digitized

AI lacks a body and tears; it cannot replace the power of physical presence.

AI as a Created Tool, Not a Savior

While AI amplifies human capabilities, it cannot love, receive revelation, or provide redemption.
